MongoDB

Assignment-2

Question:

Import the zips.json file into your MongoDB.

Database name is "population" and collection name is "zipcodes".
mongoimport --db population --collection zipcodes --file zips.json

Question:

Atlanta Population

1. use db.zipcodes.find() to filter results to only the results where city is ATLANTA and state is GA

2. use db.zipcodes.aggregate with $match to do the same as above.

3. use $group to count the number of zip codes in Atlanta.

4. use $group to find the total population in Atlanta.

Solutions:

Question:

Populations by City

1. use aggregate to calculate the total population for each city (you have to use city/state combination). You can use a combination for the _id of the $group: { city: '$city', state: '$state' }

2. sort the results by population, highest first

3. limit the results to just the first 3 results. What are the top 3 cities in population?

4. What are the top 3 cities in population in Texas?

Question:

Bonus

1. Write a query to get the average city population for each state.

 2. What are the top 3 states in terms of average city population?
